

Home Safe Home

For Your Explorer and You!

*Preventing accidents in your home involves the entire family.
Follow these tips to help keep your family safe.*

- 1** Conduct routine safety checks in your home to prevent accidents.
- 2** Have child safety locks installed on cabinets if you have young children in your home or if there are children who visit your home frequently.
- 3** Make sure that potentially dangerous products have child resistant closures. Keep such products out of reach of young children — preferably locked up and stored in high places.
- 4** Keep all household products in their original packages. Packaging includes useful first aid information in the event of accidental exposure or ingestion. Do not store cleaners in cups, soda bottles, cans or bowls, which children associate with eating and drinking.
- 5** Do not let your attention be diverted when using household chemical products, electrical appliances, power tools, etc.
- 6** If a spillage of any type occurs, clean it up immediately.
- 7** Never leave a young child unsupervised near or in a bathtub, swimming pool, hot tub, sink or buckets containing liquid.
- 8** Never give a child (or yourself) medicine in the dark.
- 9** Check with your physician or Poison Control Center to see if your household and garden plants are poisonous.
- 10** Use safety plugs in electrical outlets to reduce the possibility of shocks.
- 11** Turn pot handles away from a stove's edge.

Always read the label before using any cleaning product.
Never mix household cleaning products.
